

Summary:

Full Stack Developer with 6 years of experience building and scaling web applications across hospitality, property management, corporate, and research domains. Spearheaded end-to-end product development for 3 production platforms from database design to AWS deployment, integrating 8+ third-party APIs and delivering measurable gains including 60% faster API response times, 45% higher mobile engagement, and 2x concurrent load capacity. Core stack: React, Angular, Python (FastAPI), Node.js, MySQL, AWS, and GCP.

Technical Competencies:

Programming & Scripting: Python, C, C++, Java, JavaScript, TypeScript, PHP, R.

Frontend Development: React, Angular, jQuery, Bootstrap, Tailwind CSS, HTML.

Backend Development: Django, FastAPI, Flask, **Node.js**, GraphQL.

Database Management: MySQL, PostgreSQL, SQLite.

Cloud & DevOps Tools: AWS (EC2, RDS, S3, Lambda, Secrets Manager), GCP (Cloud Build), Docker, Kubernetes, GitHub Actions, Jenkins, Nginx

Tools/IDE/Application Servers: Visual Studio, Web Storm, VS Code, PyCharm and Git.

Professional Experience:

Discovery Capital | Columbia, MO, USA | Jan 2025 – Current

Full Stack Developer

Tour Discovery (tourdiscovery.com) - Corporate & Recruitment Hub

- Built a centralized multi-brand digital hub (React 19/FastAPI/AWS) unifying 6 business entities — residential, commercial, hospitality, dining, and entertainment — under a single responsive platform with lifestyle content architecture and cross-brand navigation.
- Engineered a dynamic recruitment portal integrating 6 Greenhouse.io ATS job boards with real-time search, department filtering, and one-click application routing, streamlining talent acquisition across the organization.
- Developed async email pipelines using aiosmtplib with dual delivery (admin notification + user confirmation) and established CI/CD via GitHub Actions deploying to self-hosted EC2 instances with Nginx and systemd-managed services

The Kitchen (thekitchen.fun) - Hospitality & Entertainment Platform

- Architected a full-stack hospitality platform serving as the digital backbone for a multi-activity entertainment venue — unifying online booking, payments, event management, and custom real-time reservation systems for ice skating and tournaments.
- Integrated 8+ third-party APIs (Square, Stripe, Planyo, Eventbrite, Greenhouse, Mailchimp, Instagram, Tripleseat) into a unified platform, automating reservations, payments, and marketing to eliminate manual operations.
- Built a dynamic pricing engine with DST-aware scheduling supporting 10+ bookable resources with time-based, day-based, and add-on pricing logic, plus automated marketing pipelines syncing customer data into Mailchimp daily.
- Implemented role-based admin dashboard with tournament management, league administration, social media automation, and real-time notification systems.

Aira Luxury Apartments (arialuxuryapts.com) - Property Management Platform

- Architected a full-stack property management platform (React 19/FastAPI/AWS) with 8 public-facing pages featuring scroll-based animations, parallax effects, interactive Leaflet maps, and a masonry-grid gallery with lightbox navigation.
- Engineered a headless CMS REST API (14 route modules, 28 tables, 23 optimized indexes) with 12+ admin modules supporting drag-and-drop reordering, bulk image uploads, publish scheduling, and real-time content preview.
- Integrated Entrata property management API for real-time unit availability with in-memory caching (10-min TTL), thread-safe locking, and background cache warming — enabling live floor plan filtering by move-in date and lease terms.
- Implemented JWT authentication with RBAC, AWS S3 presigned-URL media pipeline, and deployed on AWS (RDS MySQL, S3, Secrets Manager) with aiomysql async connection pooling for high concurrency

Cross-Platform Impact

- Tuned backend performance across all platforms via database indexing, Redis caching, and in-memory TTL strategies, lowering API response times by 60% and scaling systems to handle 2x concurrent user load.
- Led Git branching workflows, pull request reviews, and agile sprint ceremonies across all three platforms, maintaining code quality standards and on-time feature delivery.

Discovery Capital | Columbia, MO, USA | July 2024 – Dec 2024

Full Stack Developer Intern

- Launched The Kitchen website from the ground up using React.js and Python FastAPI, crafting responsive landing pages and core UI components that improved mobile engagement by 45% and processed 500+ daily transactions.
- Established a shared component library adopted across subsequent company projects, accelerating feature development by 30%.

University of Missouri | Columbia, MO, USA | Jan 2023 – Dec2024

Full stack developer - Graduate Assistant

MU-Path - Academic Pathways Visualization Platform

- Sole developer of an interactive academic pathway visualization system enabling students to navigate prerequisites and course dependencies for 100+ programs university-wide.
- Built a React graph visualization interface backed by dual Node.js/Python architecture, with custom prerequisite-mapping algorithms exposed via RESTful and GraphQL endpoints.
- Applied caching strategies and lazy-load techniques that cut pathway rendering time by 65%, deployed via GCP Cloud Build.

P3DB (Plant Protein Phosphorylation Database)

- Engineered BLAST search functionality, Kinase-Client Network visualization using graph algorithms, and an AI-powered natural language query interface for intuitive database interactions.
- Architected FastAPI REST endpoints powering all major features and led systematic bug resolution, raising platform stability by 75% while trimming page load times by 55% via lazy-load modules

Accolite Digital | Hyderabad, India | *June 2020 - Dec 2022*

Software Developer

- Delivered an end-to-end e-commerce platform using Angular 12, TypeScript, and Spring MVC, increasing customer conversion rates by 25% and improving page load speed by 50%.
- Developed Spring-based REST APIs handling 50,000+ daily transactions with 40% faster response times, and introduced 12+ shared Angular Material components adopted across 3 teams.
- Championed TDD with Jasmine/Karma reaching 90% code coverage, cutting post-deployment defects by 45%, and mentored 3 junior engineers in Angular best practices under Agile/Scrum workflows.
- Supported 3 concurrent client engagements including NTT Data, consistently shipping features ahead of sprint deadlines while handling 10,000+ daily user transactions.

Education:

University of Missouri Columbia | Columbia, MO | *Jan 2023 - Dec 2024*

Master of Science in Computer Science | GPA: 3.85/4.0
